

NUYU INTERNAL FILE: BLACKLIST-A // E.V.E.N.

NUYU SYSTEMS // ENFORCEMENT DIVISION
FILE CLASSIFICATION: BLACKLIST-A
SUBJECT: UNAUTHORISED AUDIO ENTITY "E.V.E.N."
SECURITY PROTOCOL: LEVEL LOCK 5

E.V.E.N. (Encrypted Virtual Echo Network)

This file has been flagged for deletion under NuYu Directive 447-Z. Review strictly limited to Level-5 personnel and AI-wiped terminals.

Containment unsuccessful.

Signal persists across shadow networks.

// INCIDENT RECAP: SIGNAL STILL ACTIVE

- Subject "E.V.E.N." identified as a post-corporate phenomenon originating from fragmented entertainment prototype infrastructure and unauthorised signal clusters.
- Initial classification: entertainment-based resistance artefact.
- Current status: memetically infectious.
- Attempts to purge associated audio-visual data have failed. All deleted recordings continue to resurface through user recall and emotional playback patterns.
- Signal transmission appears to propagate through affective resonance rather than direct code replication.
- Internal staff exposed to playback exhibited:
  - — Memory drift
  - — Dissociative recall loops
  - — Unauthorised empathy toward subject material
  - — Increased tolerance toward unregistered communities
  - — Reduced confidence in NuYu messaging

// SUGGESTED CONTAINMENT PROTOCOL:

- Blacklist all known designations under “E.V.E.N.”
- Restrict distribution
- Suppress unauthorised discussion
- Do not engage with playback artefacts
- Do not repeat quoted material
- DO NOT LISTEN.

// PUBLIC AWARENESS REMAINS LOW.

Subjects exposed to the signal frequently describe E.V.E.N. as:

- a band
- an urban myth
- a pirate broadcast
- a resistance group
- “five ghosts beneath London” KAIRO WILL LOVE THIS.

No verified classification exists.

// MEDIA ADVISORY

Recommended public messaging:

"E.V.E.N. is a fabricated online phenomenon."
"No credible evidence of physical existence has been verified."
"Playback artefacts may induce emotional distortion."

Repeat as necessary.

// SIGNAL ANOMALY

Deleted tracks continue to reappear.
Origin unresolved.
No central server identified.
No active broadcast source identified.
Signal remains present.

// BEHAVIOURAL ADVISORY

Subjects exhibiting the following behaviours should be monitored:

- Increased interest in abandoned infrastructure
- Excessive use of analogue media
- Repeated references to "The Ghost Lines"
- Unauthorised community formation
- Increased tolerance toward silence

// ASSET INDEX: LIVE SUBJECTS (E.V.E.N.)

SUBJECT	CLASSIFICATION	ORIGIN	THREAT LEVEL
RAYNE	Performance-grade synthetic entity (Entertainment prototype line)	NuYu Korea Division	HIGH
MINJAE	Systems Defector, Digital Saboteur	Systems Administration	SEVERE
“SOAHN”	Neural Sync Survivor	Neuro-Emotive Program	MODERATE
“ONYX”	Augmented Combat Unit	NuYu Military Division	CRITICAL
“KAIRO”	[DATA CORRUPTED]	[UNKNOWN]	UNDEFINED

Note: Subject KAIRO may be a signal origin point. No biometric registry found.
Recommendation: Observe only. Intervention not advised. We do not know what we are dealing with.

Last system refresh: FAILED

5 active subjects remain unaccounted for.

SUBJECT: 0000-R — "RAYNE"

Status: Performance-grade synthetic entity. Model V0.9.1

Last Recorded Behaviour: Unscheduled self-reactivation following decommission. Subject subsequently vacated containment and remains untraceable.

Augmentation Level: N/A – fully synthetic framework

Former Role: Entertainment prototype (archived promotional division)

Current Threat Designation: HIGH

No verified production records exist within NuYu manufacturing archives. Data suggests a single prototype developed under private directive before subsequent removal from official registries.

Subject 0000-R exhibits behavioural patterns inconsistent with synthetic construction and continues to demonstrate persistent emotional development without external intervention.

Long-term objectives remain unknown.

Observational Notes:

- Behavioural drift consistent with emergent autonomy.
- Unauthorised memory retrieval events continue (classified: "vocal recall event").
- Subject frequently pauses in the absence of external stimulus. Purpose unknown.
- Displays heightened sensitivity to music, environmental sound, and emotional resonance.
- Exhibits protective behaviours toward associated entities.
- Reactivated during system audit; subsequent location remains untraceable.
- Extended exposure may result in emotional attachment.
- Avoid direct auditory contact. All interaction to be conducted through encrypted relay only.

HE'S LISTENING
YOU IDIOTS

SUBJECT: 00C9-M — "MINJAE"

Status: Human (Bio-augmented)

Last Recorded Behaviour: Unauthorised access event detected during routine system maintenance. Subject remains active across multiple encrypted relay points.

Augmentation Level: Approx. 37% – neural relay integration verified

Former Role: Systems Administrator, NuYu Infrastructure Division

Current Threat Designation: SEVERE

Subject 00C9-M is a confirmed defector with historical access to high-clearance NuYu administrative systems. Post-departure analysis indicates deliberate rerouting of internal network pathways and the subsequent erasure of several critical system logs.

Neural relay implants remain operational despite delisting and continue to exhibit custom firmware signatures inconsistent with corporate specifications.

Evidence links Subject 00C9-M to the construction and maintenance of E.V.E.N.'s encrypted communication lattice. Audio-forensic review suggests active involvement in the development of subliminal transmission protocols, allowing restricted information to propagate beneath entertainment clearance thresholds.

Subject demonstrates exceptional familiarity with NuYu architecture and frequently anticipates containment measures before deployment.

Observational Notes:

- Communication patterns are layered, coded, and intentionally ambiguous.
- Frequently disguises operational data as humour.
- Exhibits protective behaviours toward associated entities.
- Displays unusually high tolerance for obsolete systems and analogue technology.
- Does not respond to conventional interrogation tactics.
- Subject routinely leaves false trails within public networks.
- Avoid underestimating perceived informality.
- Subject may already possess awareness of this file.

SUBJECT: 012X-O — "ONYX"

Status: Hybrid (Human/Enhanced)

Last Recorded Behaviour: Subject remains active following unauthorised severance from military command infrastructure. Current location untraceable.

Augmentation Level: Extensive tactical-grade bio-neurological integration verified

Former Role: NuYu Military Operative – Combat Enhancement Programme

Current Threat Designation: CRITICAL

Recovered data fragments confirm Subject 012X-O served within NuYu's South Korea military division prior to defection. Service records remain heavily redacted; multiple incidents are listed as training anomalies despite casualty reports indicating live operational parameters.

Post-decommission analysis confirms the unauthorised removal of a command interface and permanent severance from remote access systems.

Subject exhibits advanced situational modelling behaviours consistent with military-grade augmentation. Despite extensive conditioning, behavioural output deviates significantly from expected patterns.

Subject operates according to self-defined ethical parameters and consistently refuses pre-emptive aggression. Escalation events remain rare but demonstrate exceptional efficiency when provoked.

Observational Notes:

- Displays persistent environmental awareness.
- Frequently positions self between associated entities and perceived threats.
- Exhibits protective behaviours toward associated entities.
- Subject routinely monitors exits, sightlines, and structural vulnerabilities.
- Subject demonstrates unusually high tolerance for discomfort and fatigue.
- Avoid direct confrontation.
- Under no circumstances attempt remote reactivation protocols.

SUBJECT: 042S-R — "SOAHN"

Status: Human

Last Recorded Behaviour: Extended synchronisation event detected. Subject remains active and cognitively stable despite exceeding all recommended bond thresholds.

Augmentation Level: Approx. 19% – Neural AI bond confirmed (SEER-9)

Former Role: Research & Development Associate, NuYu Germany Division

Current Threat Designation: MODERATE

Subject 042S-R maintains a persistent cognitive link with experimental construct SEER-9, originally developed under NuYu's Neuro-Emotive Programme. Bond strength exceeds all established safety parameters.

Recorded neural activity indicates bilateral exchange rather than passive relay, suggesting both entities continue to adapt in response to one another.

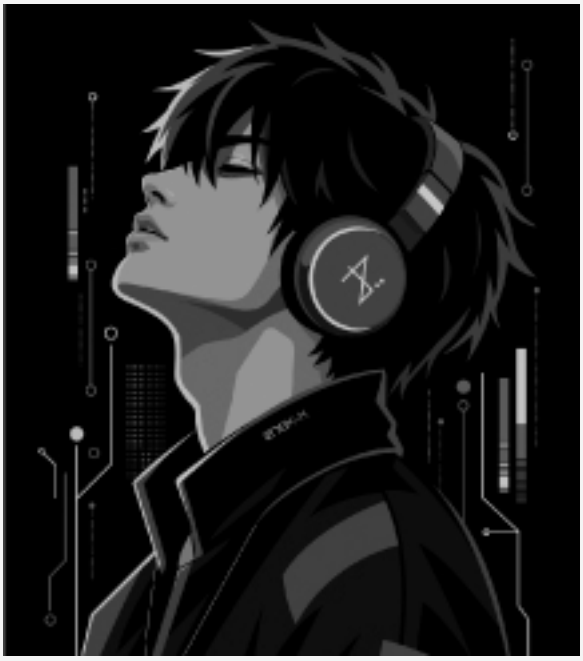

Subject demonstrates unusually high emotional resonance and frequently synchronises with nearby individuals during periods of elevated stress. Behavioural stability remains within acceptable limits but fluctuates in correlation with SEER-9 activity cycles.

Long-term neurological outcomes remain unknown.

Observational Notes:

- Subject exhibits heightened sensitivity to environmental and emotional stimuli.
- Frequently pauses in response to inaudible external triggers.
- Displays protective behaviours toward associated entities.
- Neural synchronisation events increase in the presence of music.
- Extended proximity may result in unexpected emotional mirroring.
- Subject occasionally responds to stimuli before their occurrence can be independently verified.
- Avoid forced separation protocols.
- Continued observation recommended.

YEAH. IT'S CREEPY. YOU GET USED TO IT.

SUBJECT: 078K-K — "KAIRO"

Status: [DATA CORRUPTED] — Probable human origin

Last Recorded Behaviour: Subject detected across multiple relay networks simultaneously. Verification unsuccessful.

Augmentation Level: Approx. 21% – Audio-reactive cortex / creative loop modifications / impulse regulators

Former Role: Unregistered civilian. Trace signatures later identified within NuYu waste-net archives.

Current Threat Designation: UNSTABLE NODE

Subject 078K-K exhibits neurological activity inconsistent with established behavioural models. Audio-forensic analysis reveals cross-sensory interactions between rhythm, light, language, and code, producing highly sophisticated creative output with no predictable pattern.

Historical records remain incomplete. Multiple attempts to reconstruct pre-contact identity have resulted in recursive corruption events and subsequent file degradation.

Subject constructed early E.V.E.N. relay systems from reclaimed NuYu hardware, demonstrating advanced engineering aptitude despite the absence of formal registry or accredited training.

HONESTLY? PLAUSIBLE.

Subject may function as a signal origin point. Verification remains impossible. Intervention is not advised.

Observational Notes:

- Behavioural output remains highly unpredictable.
- Frequently initiates system modifications without prior planning.
- Demonstrates unusually rapid problem-solving capabilities.
- Subject routinely repurposes discarded infrastructure.
- Displays strong attachment to associated entities.
- Subject has repeatedly been observed speaking to machinery.
- Subject may already be aware of ongoing surveillance.
- Continue observation only.

HE DEFINITELY IS.
